

U.Discover | Portable Spectrum Analyzer

Description

U.Discover is a portable handheld spectrum management controller that adopts an ultra-wideband solution and can scan frequencies from 240MHz-960MHz. It is equipped with a HD screen to display frequency details, making it clear at a glance the on-site interference frequencies. It can create a stable wireless working environment for the site, making the site frequency visible and controllable.

Product Specification

Frequency detection range:	240MHz-960MHz
Step frequency:	1-720MHz
Input signal amplitude noise floor:	-75dBm@0.5G
Antenna interface:	SMA
Charging current:	800mA (Only a USB-A to USB-C charging cable can be used)
Dimensions (mm):	72 (W) x 23 (D) x 204.5 (H)
